Art Unit: 1651

## **DETAILED ACTION**

## Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7, drawn to a method of propagating and culturing uteric bud cells in culture, classified in class 435, subclass 1.1, for example.
- II. Claims 40-42, drawn to a method of propagating and culturing metanephric mesenchyme in culture, classified in class 435, subclass 375, for example.
- III. Claims 8-10 and 22-38, drawn to a method for stimulating branching morphogenesis in kidney cell culture, classified in class 435, subclass 384.
- IV. Claims 11-20, drawn to a method for stimulating epithelial organogenesis, classified in class 424, subclass 93.7.
- V. Claims 21 and 43-48, drawn to a method for engineering a functional mammalian kidney or renal tissue, classified in class 435, subclass 373.
- VI. Claims 39, 49-56, and 67, drawn to a constructed kidney or renal tissue, classified in class 435, subclass 325, for example.
- VII. Claims 57-61, drawn to a method of treatment involving kidney transplantation, classified in class 424, subclass 422.
- VIII. Claims 62-66, drawn to a method of treatment involving administration of pleiotrophin and/or heregulin, classified in class 424, subclass 198.1.

The inventions are distinct, each from the other because of the following reasons:

The inventions of each of groups I-V and VII-VIII are directed to different inventive methods which are not connected in design, operation, and/or effect. These methods are independent since they are not disclosed as capable of use together, they have different modes of operation, they have different

Art Unit: 1651

functions, and/or they have different effects. One would not have to practice the various methods at the same time to practice just one method alone. Specifically, the method of Group I requires the isolated culture of embryonic uteric bud cells, which is not performed by the other methods. The method of Group II requires the isolated culture of embryonic metanephric mesenchyme, which is not performed by the other methods. The method of Group III requires contacting mature kidney cell culture with mesenchymally-derived growth factors, which is not required by any of the other groups. The method of Group IV requires culture of mature epithelial tissues, which is not required in any of the other methods. The method of Group V requires the co-culturing of uteric bud cells and metanephric mesenchyme in a specific matrix, which is not required by any of the other groups. The method of Group VII requires a step of transplanting a kidney, which is not required by any of the other groups. The method of Group VIII requires a step of administering pleiotrophin and/or heregulin directly to a patient, which is not required by any of the other groups.

Inventions V and VI are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the engineered functional mammalian tissue can be made by a variety of cell culture methods including use of a cell scaffold and seeding appropriate cells thereon; therefore the product can be made by methods distinct from the method of invention V. The methods of Groups I-IV and VII-VIII do not create an engineered kidney or renal tissue as taught by Group V; therefore the methods are unrelated to the product.

Therefore, a search and examination of all inventions in one patent application would result in an undue burden. These inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, different classifications, and a search

Art Unit: 1651

for one group does not require a search for another group, restriction for examination purposes as indicated is proper.

Claims 6 and 47 are generic to a plurality of disclosed patentably distinct species of biocompatible matrix material comprising a) a cotton, b) a collagen, c) a polyglycolic acid; d) a cat gut suture; e) a cellulose; f) a gelatin; g) a dextran; h) a polyamide; I) a polyester; j) a polystyrene; k) a polypropylene; l) a polyacrylate; m) a polyvinyl; n) a polycarbonate; o) a polytetrafluorethylene; p) a nitrocellulose compound; q) a Matrigel. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Art Unit: 1651

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Allison M. Ford whose telephone number is 571-272-2936. The examiner can normally be reached on 7:30-5 M-Th, alternate Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Wityshyn can be reached on 571-272-0926. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
